

Protecting you & your property using nature's insecticide

**Our service program features EcoSMART®'s
Patented Botanical Products.**

As a Pest Management Professional,
we are constantly striving to improve our service
by utilizing the latest technology available.

We proudly use products from EcoSMART
Technologies which contain a patented blend
of botanical oils that effectively targets a broad
spectrum of pests...not people or pets.

What You Need To Know About EcoSMART's Patented Botanical Products

Unique and Patented Mode-Of-Action:

EcoSMART's plant oil active ingredients target and block a key neurotransmitter receptor site for octopamine, which is found only in invertebrates (i.e. insects).

Unprecedented Margin-of-Safety:

Mammals do not have receptors for octopamine, so EcoSMART's plant oils have no adverse effect on them. Additionally, many of the plant oils used are classified as "Generally Recognized As Safe" (GRAS) and/or are approved for food and beverage consumption by the U.S. FDA.

Effective Against a Broad Spectrum of Insect Pests:

EcoSMART's botanical products are as effective as conventional pesticides, providing both quick knockdown and control against a wide variety of indoor and outdoor pests.
